

Statues of Prehistoric Venuses found all over the World
By Gaetano Bugelli

There are many venuses that have either big boobies or big buttocks. I think I have an idea why they are carved like that. I think that at the time many people were suffering from steatopygia.

Venus Number 1: The Venus of Willendorf

The Venus of Willendorf dates back to 25,000 years BC and is made of Oolithic limestone. The statue was found in the Palaeolithic archaeological sites at Willendorf in Austria as part of the Wachau railway construction.

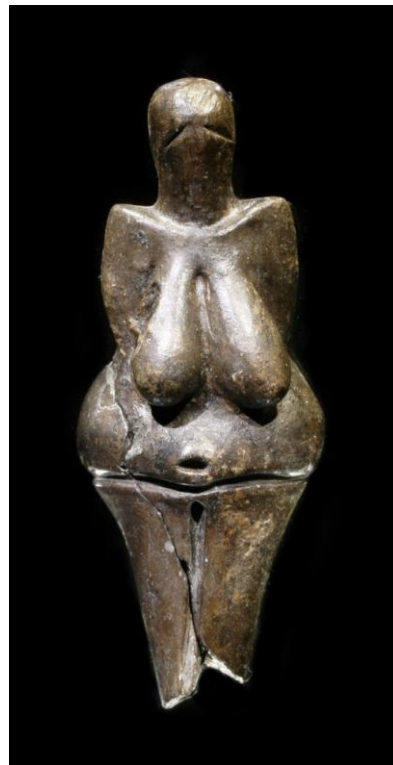

Venus Number 2: The Venus of Lespugue

The Venus of Lespugue dates back to 23,000 years BC and is made of mammoth ivory tusk. The statue was found in the Rideaux cave of Lespugue in the foothills of the Pyrenees, part of the Haute Garonne region of France.

Venus Number 3 : The Venus of Dolni Vestonice

The Venus of Dolni Vestonice dates back to 26,000 years BC and is made of a mixture of animal bone meal and clay. The statue was found in the palaeolithic settlement of Dolní Vestonice which is in slopes of the Pavlov Hills in Czech Republic.

Venus Number 4: The Venus of Mal'ta in Siberia

The Venus of Mal'ta dates back to 21,000 years BC and is made of mammoth ivory tusk. The statue was found in a cave at Mal'ta, at the Angara River, near Lake Baikal in Irkutsk Oblast, Siberia.

Venus Number 5: The Venus of Brassempouy

The Venus of Brassempouy dates back to 23,000 years BC and is made of mammoth ivory tusk. The statue was found near Brassempouy, in a place known as the Galerie des Hyènes (Gallery of the Hyenas) and the Grotte du Pape (the Pope's Cave).
